

QUICK START for the AP-1

1

Start with the (4) conductors from the POWER/CAN side of the module (shown on left)

2

Your system should supply 6VDC to 30VDC between **SUPPLY + (red)** and GND (black)

3

Connect CAN H (blue) and CAN L (white) to your CAN Bus communication lines

4

Connect hoses to the barbed fittings

Use caution: the barbed fittings are plastic, and can be broken if excess force is used when removing hoses
Soft material hoses such as silicone are recommended

5

Note: Be sure you have 120 ohm termination resistors on each end of the CAN bus long-run, and branches no longer than 0.3 meter

*per CAN Specification for 1Mbit/s rate

6

You should see the CAN messages streaming on your CAN system (default set at 1Mbit/s bit rate)
