

ThermaSentry

Forehead Temperature Measurement Station

About ThermaSentry

- Uses infrared waves to measure forehead temperature with no contact and no operators necessary
- All measurements are recorded and stored with the wireless operating system
- Setup is easy and tripod height is adjustable

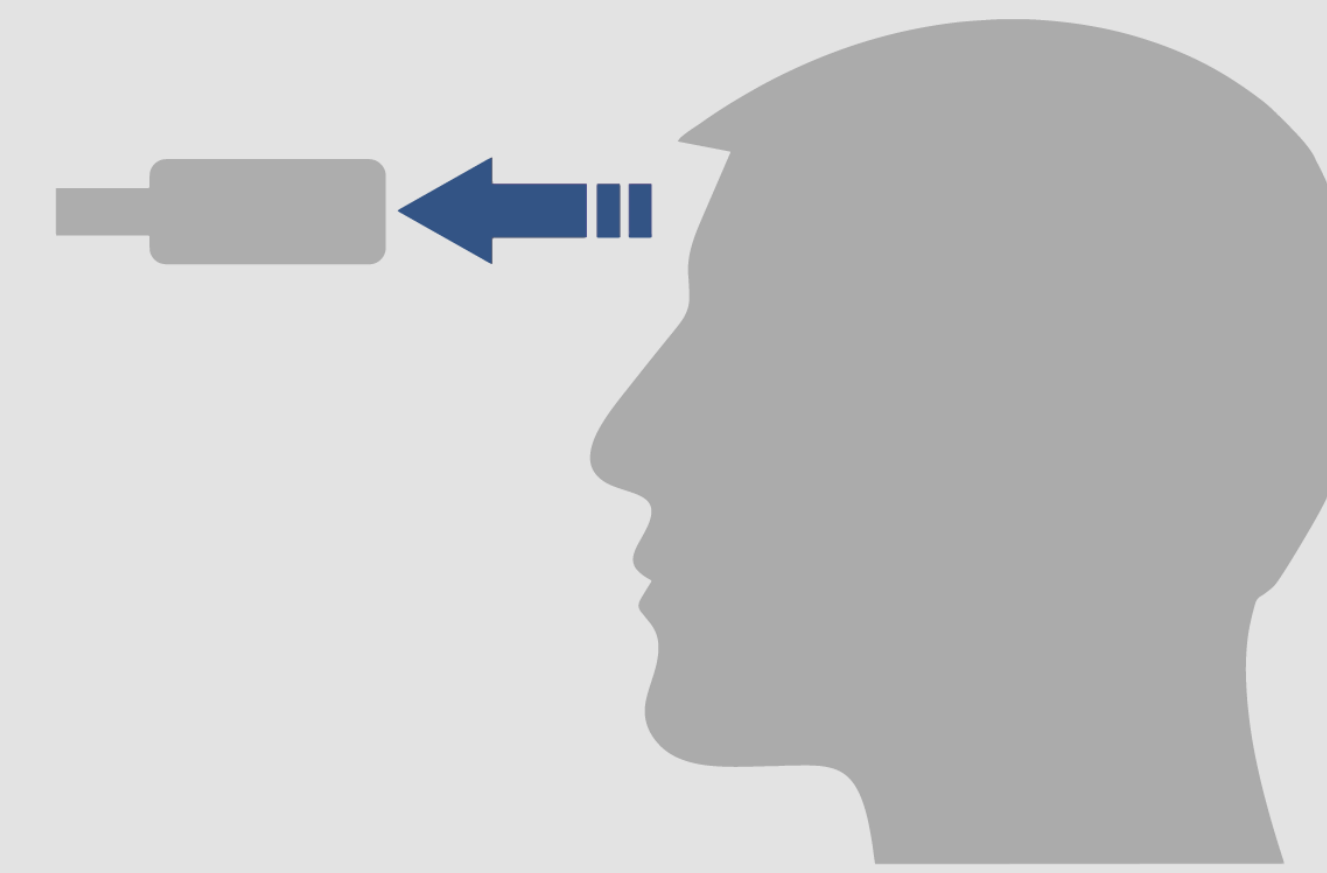

Details

- Fahrenheit and Celsius unit options available for selection
- Tripod height can be manually adjusted from 35 to 78 inches (88.9 cm to 198.12 cm)
- Data logs can be exported from tablet for analysis
- Price: \$ 2695.00

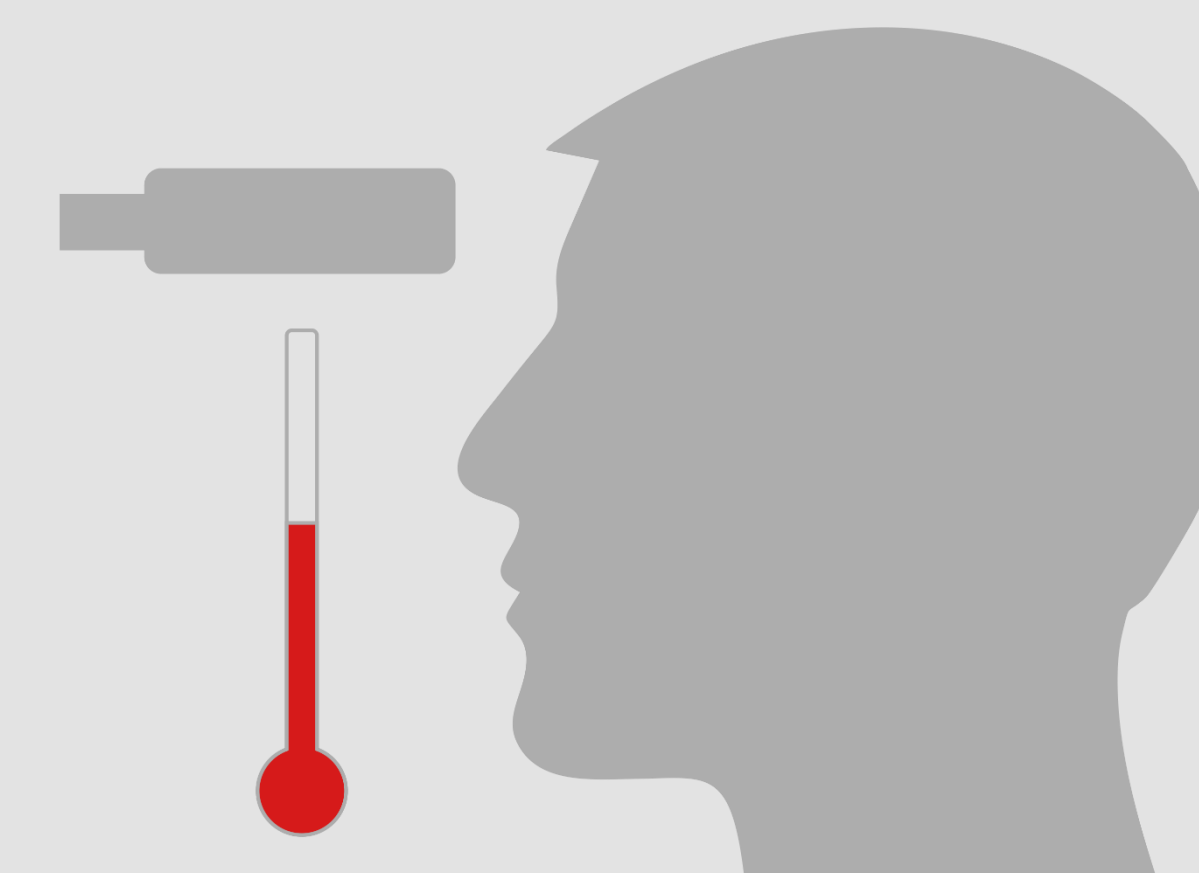

How it Works

- 1 Approach tripod from appropriate distance

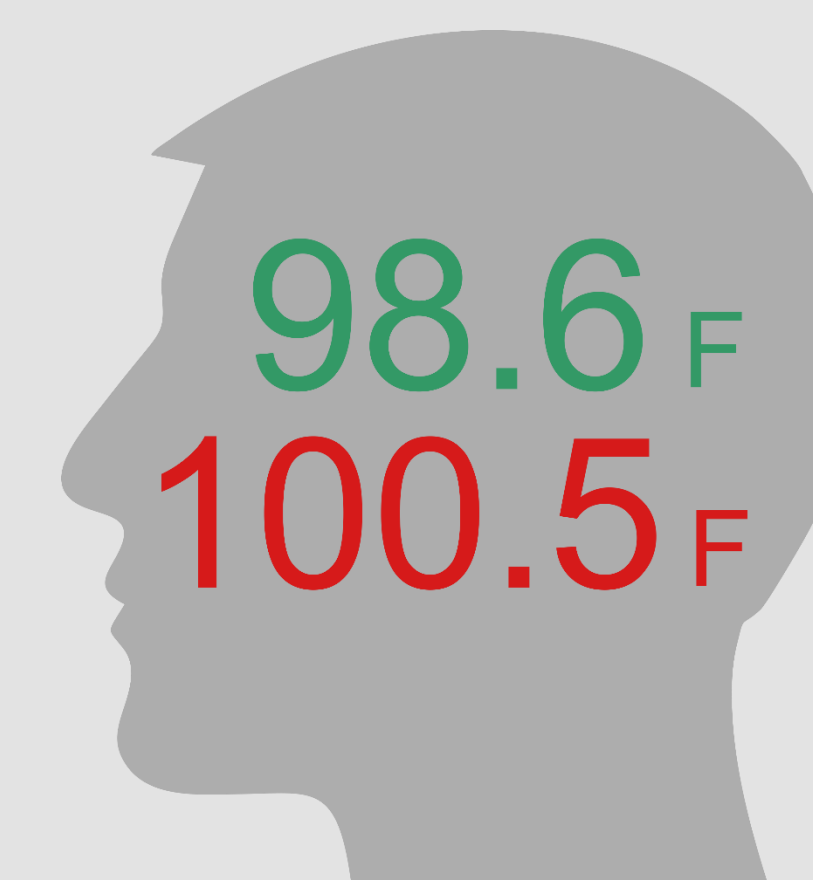

- 2 Hold forehead near sensor and wait until your temperature reading appears on the tablet screen

- The device will prompt you to move closer if necessary

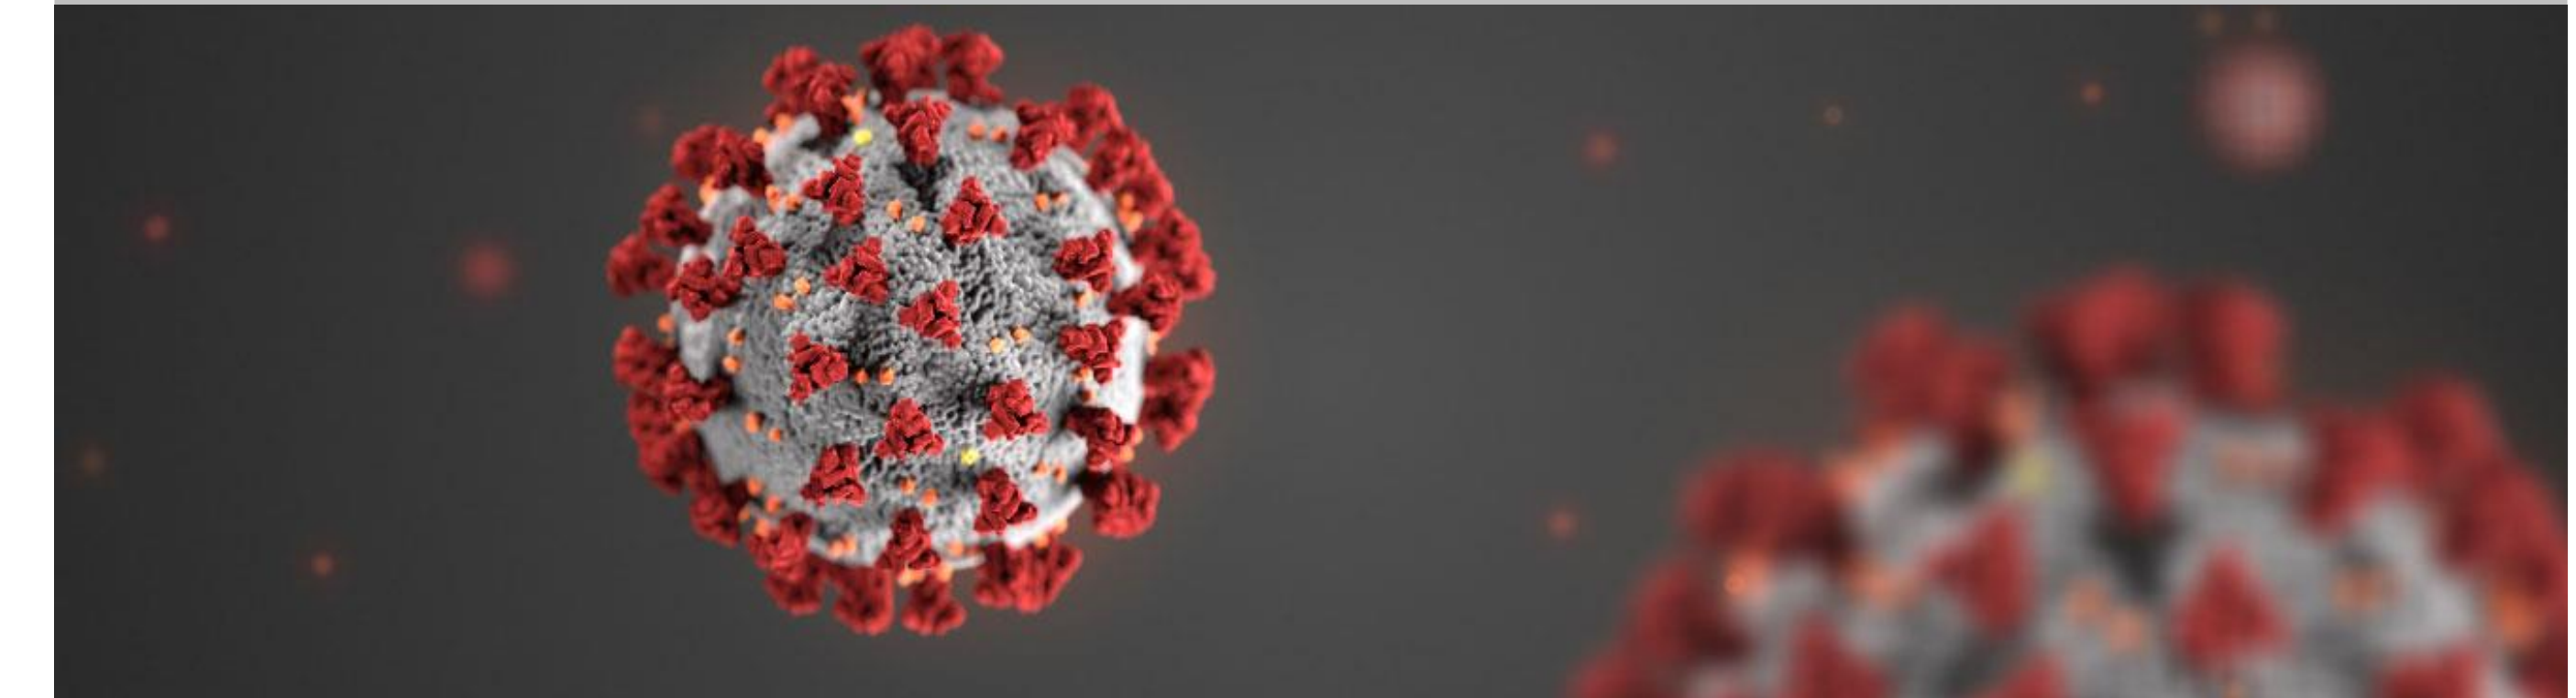

- 3 Green numbers mean the reading is within the normal range, and red numbers signify a high reading

- If a fever is detected, seek further testing

Uses

Detect fevers and limit contagion

- Check forehead temperature of all employees before and after shifts
- Measure forehead temperatures of customers before entry

What's Included?

- Sensor
- Tripod
- Tablet with pre-loaded sensor app
- Charging cable
- Carrying case
